

FET

WPM SYSTEM

PRODUCT-NO.: 234723

Targeted control – planned expansion.

The WPM system is a radical new control concept. The comprehensive functions of the WPM standard module can be extended with WPE modules and the FET remote control. All of these components can be conveniently connected to one another via the system bus. The WPM heat pump manager is the central control unit of the system, its integral programming unit is able to regulate numerous functions, such as a cascade of two heat pumps or the control of one direct heating circuit and two heating circuits with mixer. If extended to include the WPE module, a further four heat pumps and two further heating circuits with mixer can also be controlled. These heating circuits (five in total) can each be controlled by an FET remote control. The components combine functionality, extendibility and ease of installation. All the modules feature the attractive new design and have significantly improved connections for the electrical installation components.

The main features

Room based remote control with thermostat function for the WPM

Touch wheel operation

Room temperature and humidity measurement

Easy adjustment of the comfort temperature

Type	FE 7	FET	WPE
Part no.	185579	234723	234725
Height	80,00 mm	96,00 mm	400 mm
Width	80,00 mm	145,00 mm	310 mm
Depth	30 mm	31 mm	100 mm

Technical data

Type	WPM
Part no.	234727
Height	400 mm
Width	310 mm
Depth	100 mm
